CUT-TO-SIZE SPECIFICATIONS

SPECIFICATIONS & ADDITIONAL CHARGES

		GLASS THICKNESS					
	DS & SS	5/32	3/16"	1/4"	3/8"	1/2"	3/4"
Minimum Quantities							
Annealed - Translucent & Mirror per order		1 sq ft - All glass thicknesses					
Annealed - Pattern Glass	1 sq ft per piece	3 sq ft per order					
Annealed - Robax	No Min.						
Tempered - All Glass Types per piece		3 sq ft - All glass thicknesses					

Dimensions & Tolerances

Out of Square	WSD does not charge for out of square conditions						
Tolerances	±1/16"	±1/16"	±1/16"	±1/16"	±1/8"	±1/8"	±3/16"
Hold Exact Size	Add 20% to order						

Edgework Requirements

Annealed	All annealed shipped goods will be seamed // Seaming charges apply (see page 8)						
Tempered	All tempered includes seaming in tempering price				Satin Polish (charges apply)		

Size Charges

Undersize Items	Lites with a width of less than 10" will be calculated as a minimum of 10" All glass thicknesses						
Undersize Charge Charged on items less than 8" down to 2" that require bevel or miter					\$88.00	\$88.00	\$88.00
Tempered Oversize Charge Charged on glass ≥ 120"	Add 75% to square foot price						

Oversize Charge (per piece)	\$23.10 multiplied by Oversize Quantity						
Oversize Quantity = sq ft of piece / thickness figure <i>Note: Oversize Quantity must be 1 or greater for oversize charge to apply</i>	Oversize Quantity Example (using 1/4" glass)			Thickness Figure (below)			
	sq ft of piece	=	36 sq ft	=	1.5	24 sq ft	20 sq ft 15 sq ft 7 sq ft
	thickness figure		24 sq ft				

Other Charges

EnduroShield	Add \$3.15 per sq ft (Care Package not included)
Tempering Limitations - Additional tempering limitations can be found on page 11

ETCHED FINGER PULL– \$35.00 - Standard Size 5/8" x 2 3/4"										

OUT OF SQUARE DRAWING REQUIREMENTS

All dimensions provided are to be centerline dimensions.
Ensure all out-conditions add-up before placing order.

PATTERNS

PATTERN CHARGES –

PATTERN CHARGE

Diameter Patterns on 3/8" & 1/2"	20.00
Diameter Patterns on 3/4" & Lami	35.00
Patterns for thicknesses on glass ≤3/16" with a seamed edge	20.00
Patterns on all other glass thicknesses with a seamed edge & Patterns on all glass thicknesses with a polished edge	45.00
Patterns on laminated glass	60.00

ADDITIONAL CHARGES – 5-8 sided patterns require shapes polishing.

BLOCK SIZE CALCULATIONS – Additional material is required during the fabrication process to create a quality pattern. Use the following table to find your glass thickness and add the listed measurement to each dimension to determine the correct block size needed for your pattern.

THICKNESS	ADD TO EACH DIMENSION
1/8"	2"
3/16"	
1/4"	
3/8"	4"
1/2"	
3/4"	6"

CUTOUTS – Customers are responsible for cutting out patterns. A full size pattern is require for shapes other than squares, rectangles & diameters.

DIAMETERS – Diameters/Patio Tables over 36" on 3/16" Aquatex will charge for full stock sheet of pattern glass.

MATERIAL – Reference the following chart for acceptable pattern materials. WSD will return all patterns submitted on unacceptable materials.

ACCEPTABLE	UNACCEPTABLE
Luan	Tissue Paper
Masonite	Wrapping Paper
White Butcher Paper	Newspaper
Glass	Brown Kraft Paper
Cardboard	Rosin Paper

PATTERN MATCHING – WSD will match the submitted pattern; not dimensions. Submitted patterns must specify viewing from smooth or textured surface.

QUALITY – The quality of the pattern that you send to WSD directly impacts the quality of the finished goods.

TEMPERING LIMITATIONS

HOLES AND NOTCHES – This chart should be used to determine minimum sizes and placement of holes and notches in tempered glass:

GLASS THICKNESS (t)	1/8"	3/16"	1/4"	3/8"	1/2"	GENERAL RULE
Minimum Diameter of Holes (A)	1/4"	1/4"	1/4"	3/8"	1/2"	$A \geq t$
Distance from Hole Rim to Edge of glass (B)	1/4"	3/8"	3/8"	9/16"	3/4"	$B \geq 1.5t$
Distance between rims of holes (C)	3/8"	3/8"	1/2"	3/4"	1"	$C \geq 2t$ and $3/8"$
Distance from Corner to Rim of Hole (E)	13/16"	1 7/32"	1 5/8"	2 7/16"	3 1/4"	$E \geq 6.5 \times t$
Minimum Fillet Radius (F)	3/8"	3/8"	3/8"	3/8"	3/8"	

- Countersink holes require technical review and approval before order acceptance.
- Large holes and notches greater than 1/3 the narrow dimension require technical review and approval.

HOLE AND NOTCH LOCATION TOLERANCES

- For dimensions of hole center from specified edge $\pm 1/16"$
- For dimensions between hole centers $\pm 1/16"$
- Chips and flakes will not exceed $1/16"$
- Notch dimensions for glass 1/4" and under $\pm 1/16"$
- Notch dimensions for 3/8" and 1/2" $\pm 1/8"$

TEMPERED SIZE RANGE – Three (3) square foot minimum, odd or fractional dimensions will be billed at the next higher even inch.

THICKNESS	MINIMUM SIZE	MAXIMUM SIZE	GLASS SIZE TOLERANCE
1/8"	5" x 11"	34" x 76"	±1/16"
3/16"		72" x 120"	
1/4"	3" x 11"	84" x 130"	±1/8"
3/8" - 1/2"			
Glass over 120" add 75% to appropriate square foot price			Hold to exact size - Add 20% to order

EDGE TREATMENT – Tempered glass has seamed edges unless ordered with polished edges. The seamed edge is not a suitable exposed finished edge. 1/2" tempered glass requires satin polished edge.

TEMPERED CERTIFICATION LOGO – Tempered glass is permanently labeled unless ordered "NO LOGO".

DISTORTION – Heat treating adds distortion to glass products. All requirements for distortion, roller wave, consistent furnace orientation or distortion measurement must be disclosed at quotation and order.

STRAIN PATTERN – Tempered glass contains a strain pattern or "Quench Marks" that appear as areas of shadows in a pattern corresponding to the location of air nozzles in the tempering furnace quench section. This condition becomes more visible:

- Under certain lighting conditions, like polarized sunlight
- When the glass is viewed at glancing angles
- With tinted glass, especially when multiple lites are combined in laminated and insulating constructions

The strain pattern is not considered a defect in tempered glass products.

SPONTANEOUS BREAKAGE – Tempered glass is subject to rare spontaneous breakage, where the glass will break for no apparent reason.

INSTALLATION – Monolithic low light transmitting glass (i.e. Midnight Grey, Low-E, 3/8" and 1/2" Bronze and Grey) should be glazed with a consistent tin side/ air side orientation.

CRATING – WSD no longer offers crating as a delivery option.

FABRICATION – All fabrication that penetrates the glass surface (i.e. holes, notches, sand blasting, cutting) must take place prior to tempering.

GLASS QUALITY – All tempered glass shall conform to Consumer Product Safety Commission (CPSC) Standard 16 CFR 1201.

CERTIFICATE OF TEMPERING – Certificate of tempering are available upon request.

CANCELLATIONS – If manufacturing has started on an order and changes or cancellation occurs, the customer will be shipped the raw glass and billed for the same.

EDGE WORK PROFILES

EDGEWORK INCLUDES HIGH POLISH EXCEPT AS NOTED*

FABRICATION

Beveled Edge*

Available on 1/8", 1/4", 3/8", 1/2", 3/4" glass thickness

*Satin Edge

TOP VIEW

0-45° Miter Edge

Available on 1/4", 3/8", 1/2", 3/4" glass thickness

Double Beveled Edge

Available on 1/4", 3/8", 1/2", 3/4" glass thickness

Chamfer Edge

Available on 3/8", 1/2", 3/4" glass thickness

Dual Beveled Edge

Available on 3/8", 1/2", 3/4" glass thickness

Pencil Polish Edge

Available on 1/4", 3/8", 1/2", 3/4" glass thickness

Flat Polish Edge

Available on 3/16", 1/4", 3/8", 1/2", 3/4" glass thickness

BEVELED STRAIGHT LINE ILLUS.

1" straight line bevel with 1-1/4" radius corner to retain 1" bevel at radius corner.

1-1/2" straight line bevel with 1-3/4" radius corner to retain 1-1/2" bevel at radius corner.

FABRICATION

BEVELED RADIUS CORNER ILLUS.

1" or 1-1/2" beveled radius corner - minimum 2" radius on outside corner.

CONTOUR MUNTIN – IN-LINE CLIP

The muntins slide onto the in-line muntin clip.

CONTOUR MUNTIN – SNAP OVER CLIP

INSUL GLASS

One muntin is cut. One side of a snap over clip is placed at the intersection of the muntins.

The next muntin is placed over the clip and precut muntin.

The second side of the snap over clip is put into place and snapped together

Helps reduce condensation.

Effective against damaging moisture on wood areas with finishes applied.

Replaces applying plastic on windows annually.

Fits in area used by window screen (operating windows).

Can be used with stationary units and other types of windows.

One (1) lift handle (black only) applied for easy handling.

Available in six colors:

- Bronze
- Driftwood
- White
- Mocha
- Green

With black Foamtite weatherstripping.

Extruded aluminum frame.

INSUL GLASS

I.G. UNIT LIMITED WARRANTY

For a period of ten (10) years from the date of purchase, Wisconsin Shower Door warranty is as follows: will not develop material obstruction of vision (on internal glass surfaces) as a result of dust or film formation caused by failure of hermetic seal. Glass is not warranted against breakage.

Precondition of this warranty is that all insulating glass units be installed in accordance to FGMA glazing manual standards and practices. Furthermore, all units must be installed in such manner as to completely repel water for the entire period of the warranty by use of approved sealants only.

This warranty does not apply to insulating glass units used in vehicles, commercial refrigeration, marine, swimming pool enclosures, greenhouses, airports, sloped applications, and skylights. **This warranty also does not apply to units manufactured with SuperSpacer.** We assume no responsibility for any damage due to thermal breakage or improper use or handling.

This warranty is made to our immediate customer only and all liability shall be limited to replacement of failed unit or refund of the original purchase price. No employee, dealer or agent for Wisconsin Shower Door is authorized to add or modify this warranty.

This warranty is the only warranty made, and it is made expressly in lieu of all other warranties and under no circumstances whatsoever shall we be liable in any way for incidental or consequential damages of any kind with regard to our product.

I.G. UNIT PERFORMANCE CHART

I.G. UNIT GLASS TYPE	% OF VISIBLE LIGHT TRANSMITTANCE	SOLAR HEAT GAIN COEFFICIENT	FADING TRANSMISSION	WINTER U-VALUE AIR / ARGON
Clear/Clear	81	.76	.59	.49 / .47
Clear/Pilkington Energy Advantage (Low E)	77	.75	.49	.33 / .28
Clear/Guardian 7036 ClimaGuard (Low E)	71	.38	.33	.29 / .24

VISIBLE LIGHT TRANSMITTANCE – The percentage of visible light (390 to 700 nanometers) within the solar spectrum that is transmitted through the glass.

SOLAR HEAT GAIN COEFFICIENT – The amount of solar radiation that enters the building as heat. The lower the number, the better the glazing is at preventing solar gain.

FADING TRANSMISSION – The portion of energy transmitted in a special region from 300 to 600 nanometers. This region includes all of the ultraviolet energy and part of the visible spectrum, and will give the best representation of relative fading rates. The lower the number, the better the glass is for reducing fading potential of interior furnishings.

U-VALUE – This represents the heat flow rate through a window expressed in BTU/HR/TR2/°F, using winter weather conditions of 0°F outside and 70°F inside. The lower the number, the better the window system is at reducing heat loss.

ADJUSTABLE SHELF BRACKETS

Adjustable Shelf Brackets

- For shelves up to 10" deep.
- Use in home, office and workshop.
- Ideal applications:
telephone - speakers - bathroom - kitchen - etc...

INSTALLATION INSTRUCTIONS

1. Loosen adjusting screw (A) to expose wall fixing hole.
 2. Mark position on wall and level to other shelf grip, no further than 16" apart.
 3. Whenever possible, anchor screws into wall stud.
 4. For stud mounting, drill hole using 1/8" bit, to the depth of the screw and screw in firmly.
 5. If using a wall anchor is necessary, be sure to select proper anchor for wall material.
 6. Fit plastic cap (B).
 7. Be sure that foam cushion (C) is in place for glass shelf application.
 8. Fit shelf ensuring that it is fully positioned to the back of the shelf grip.
 9. Tighten adjusting screw (A) to grip shelf firmly.
- (The quality and thickness of the shelf, the number of shelf grips and the type of wall will affect the loading capacity.)

HANG-IT™

Hang-It™ has been designed to be used with all types of mirrors. It's high strength adhesive backing adheres to all mirror paint backings that meet industry standards. Hang-It™ saves time and labor when installing decorator mirrors. Simply peel off the protective paper on the back of the metal hanger, align the saw tooth slot of the metal hanger with centering lines you have established on the mirror, and press in place. Hang your new mirror on the wall making sure the saw tooth slot is positioned where you want the mirror to be hung.

INSTALLATION INSTRUCTIONS

1. Clean any contaminants from the back of the mirror, using a mixture of alcohol and water or denatured alcohol.
2. Locate the center of the mirror and draw a vertical line from the top to the bottom.
3. Measure down 3" to 6" from the top of the mirror and make a mark on the centering line. This marks the location from the top of the hanger.
4. Locate the center of the hanger. Mark with a line. (The saw tooth slot is centered at the top of the hanger.)
5. Peel the adhesive protective paper from the back of the hanger. Align the centering marks on the mirror and hanger. Press in place, making sure the Hang-It™ bracket is making full contact with the back of the mirror.

PRECAUTIONS

1. Make sure mirror and Hang-It™ are applied at or above 60° room temperature when assembled.
2. After installing Hang-It™ on the mirror, wait at least 2 hours before hanging the mirror. The adhesive gains strength in time and fully cures in 7 days.
3. Hang-It™ will support decorator mirrors weighting up to 40 lbs.
4. Always use gloves when handling mirrors, to protect yourself and avoid damaging the mirror.

ROBAX® GLASS

ROBAX® glass-ceramic has a thermal endurance far exceeding that of normal tempered glass. Tempered glass is generally limited to applications that do not exceed 500°F. However, ROBAX® is designed to operate at temperatures ranging from minus 400°F to plus 1400°F. Because of its special composition and processing, this unique material can withstand a quench into ice water from red hot temperatures.

With ROBAX® glass-ceramic windows in your stove or fireplace, you can enjoy the fire view with the assurance that the window has been designed with a superior margin of safety for your home and your family.

- This material is actually a transparent glass-ceramic manufactured by Schott Glaswerkes.
- Unlike tempered glass, 1400° glass-ceramic is unstressed.
- Easily cut and sanded – even drilled.
- Will not shatter (like tempered glass).
- Fire to ice without breaking.
- Good strength.

This is an excellent replacement in most applications for any of the following glasses: PYREX®, BOROFLOAT®, TEMPAX®, VYCOR®, PYROCERAM®, AND NEOCERAM®.

Typical applications include: wood stove, pellet stove and coal stove windows; wood and gas fireplace doors; oven door windows; high intensity light covers; furnace observation windows; barbecue grill windows; spark and flame guard panels.

In the photo above, a cutting torch was placed below the ROBAX® and heated until it was red-hot. Cold water was then poured onto the glass from above. There was NO Breakage.

ENDUROSHIELD

Save time and money with EnduroShield®, the revolutionary, non-stick treatment that is ideal for shower glass. EnduroShield glass treatment makes cleaning shower glass easy and repels soap scum, grime and dirt. EnduroShield reduces your cleaning time by up to 90%.

Untreated glass is porous and as a result absorbs mineral deposits and soap scum, making it more and more difficult to clean overtime. Shower glass is subject to mineral deposits from water, shampoo, soaps, body fats, and harsh scrubbing using toxic cleaners, causing the glass to discolor and develop irremovable staining. EnduroShield is an ultra-thin transparent glass coating that completely adheres to the surface and provides protection that will repel both water and oil based stains. Similar to a non-stick fry pan, cleaning is made easier using a mild detergent or white vinegar with a damp microfiber cloth. No longer is scrubbing with harsh toxic cleaners needed.

WARRANTY

Extensive testing has proven EnduroShield to last beyond 10 years, enabling a genuine 10-year limited warranty* on all new glass surfaces.

CARE & MAINTENANCE

For best results simply drying the glass with a squeegee or towel after each use will help keep the glass clean and reduce mineral spots forming. The glass needs to be cleaned every few weeks using a damp microfiber cloth and a mild detergent to break down soaps, oils, and conditioners on the glass.

The below products have been tested for compatibility with EnduroShield.

- Lysol 4 in 1 Bathroom Cleaner
- Fantastik Orange Action
- Green Works Natural Glass & Surface Cleaner (by Clorox)
- Mr. Clean Magic Eraser (when damp)

A thorough rinse with clean water should follow immediately after use of any cleaner.

CAUTION: Prohibited Products

Be careful not to use any rough, gritty, abrasive, highly acidic or alkaline cleaners as they may damage the protective coating. This includes products such as Comet (powder), Ajax, or cerium oxide which damage or polish back the actual substrate.

For warranty registration, additional information, and full care instructions visit www.enduroshield.com.
